

ABHISHEK KUMAR

Cybersecurity Analyst (SOC L1)

+91 9667686471 | kumarabhishek1562041@gmail.com | linkedin.com/in/abhishek-kumar-6840712b7 | Delhi, India

PROFESSIONAL SUMMARY

I am a **Cybersecurity Analyst (SOC L1)** who got into security not just to learn theory, but to actually understand how attacks happen — and how to stop them. Over the past few months, I have worked across three internships where I got my hands dirty with real log analysis, SSH brute-force detection, network scanning, and vulnerability assessments. I work daily on **Linux**, use tools like Nmap, Wireshark, and Burp Suite regularly, and keep sharpening my skills through TryHackMe and HackTheBox labs. I am at the start of my career — but I take it seriously.

TECHNICAL SKILLS

SIEM & Monitoring **Splunk Log Analysis Alert Investigation**

Networking **TCP/IP DNS HTTP/HTTPS Packet Analysis**

Security Tools **Kali Linux Nmap Burp Suite Wireshark VirusTotal**

OS **Linux (CLI) Log Monitoring**

Concepts **Incident Response Threat Detection Vuln. Assessment MITRE ATT&CK;**

PROFESSIONAL EXPERIENCE

Cyber Security Analyst Intern

Mar 2026 – Present

[TechnoHacks](#) • [EduTech](#) • Remote

- Analysed Linux system logs to detect SSH brute-force attacks and unauthorised access attempts.
- Investigated security alerts and identified suspicious login patterns.
- Applied SOC L1 methodologies for incident detection and response.

Cyber Security Analyst Intern

Mar 2026 – Present

[Future Interns](#) • Remote

- Performed network scanning and enumeration using Nmap on Kali Linux.
- Identified open ports, services, and potential vulnerabilities.
- Conducted basic risk analysis and documented detailed security findings.

Cyber Security Intern

Mar 2026

[Pinnacle Labs](#) • Remote

- Completed hands-on labs covering cybersecurity fundamentals and attack detection.
- Assisted in vulnerability identification and security assessments.

PROJECTS

■ Log Analysis & Threat Detection

Detected brute-force attacks using Linux log data; identified malicious IP patterns and login anomalies through manual log parsing and pattern recognition.

■ Web Application Security Testing

Discovered XSS and input-validation vulnerabilities in test environments using Burp Suite; documented findings with severity ratings.

■ Password Strength Analyser (Python)

Built a Python-based CLI tool to evaluate password security strength using entropy scoring, common-pattern detection, and policy compliance checks.

■ Phone Number Intelligence & OSINT Tool (Python)

Developed a passive OSINT reconnaissance tool using Google's phonenumbers (libphonenumbers) library. Extracts geographic region, mobile network carrier, timezone, and number validity from any international phone number — demonstrating real-world reconnaissance techniques used in ethical hacking and digital forensics. Tech: Python 3.x | phonenumbers | OSINT / Recon.

EDUCATION

Bachelor of Computer Applications (BCA)

2025 – 2028

[IGNOU \(Indira Gandhi National Open University\)](#)

Class 12 – Commerce

2023 – 2024

[Kamal Model Senior Secondary School](#)

CONTINUOUS LEARNING

Actively solving real-world SOC scenarios on **TryHackMe** and **HackTheBox** – covering threat detection, incident response, and security monitoring labs.

LANGUAGES

Hindi – Native | **English** – Professional Working Proficiency
